

Penguin Crew

Plan an event from Slack. See what each agent did.

Vultr Agent Arena / Challenge 1

September 27, 2026

One request, one shared event plan

“Plan a Salesforce Park event next month. Get 30 water bottles and invitations ready.”

01 Concierge

Opens the project and keeps the thread together

03 Buyer

Sources bottles and prepares a checkout handoff

02 Events

Proposes dates, the TJPA permit inquiry route and invitation copy

04 Treasurer

Records the estimate, budget and purchase reason

Live Slack: after a worker restart, the same project changed from 30 to 24 bottles.
The updated \$486.00–\$561.84 product-only estimate is not a payment.

Vultr powers the reasoning and isolated work

Control VM

Slack listeners and role workers
Postgres runs, memory and receipts
Calls Vultr Serverless Inference

Sandbox VM

Disposable Python and browser
containers
Read-only code runtime with no network
No application credentials inside

Rechecked September 27

Public lab returned 42, then timeout exit 124, then 42. No ephemeral containers remained.

Work before and during the hackathon

Before 11:30 AM, Sep 26

11:19 AM first commit
Small local policy and
sandbox scaffold

Sep 26, after start

Vultr VMs and inference
Four Slack bots
Eventbrite RSVP publication
Isolated code and timeout
proof

Sep 27 deployed code

Scoped Postgres memory and
four-role recall
Checked event plan and
24-bottle amendment
Official TJPA permit inquiry
route
Read-only Eventbrite status
and judge feed

50 local tests pass. Live Slack confirms the project and amendment; Eventbrite confirms Oct 2 live.
Lab: 42 / exit 124 / 42 with zero leftover containers. No booking, purchase or invitations.

Brave search still needs a configured key.
